

The Third International Nonlinear Dynamics Conference (NODYCON 2023) will be held in Rome, June 18-22, 2023. The previous NODYCON conference was hosted in 2021 as a virtual online conference to promote the sense of cohesiveness and liveliness of the NODYCON community notwithstanding the uncertainties related to the COVID-19 crisis. After the successful launch of NODYCON in Rome in 2019, NODYCON 2023 will be held in Rome again as an in-person meeting but online attendance will also be arranged. The 2023 Edition will feature several keynotes of broad interest, round tables, workshops, and oral presentations covering recent advances in the rich spectrum of topics covered by NONLINEAR DYNAMICS, including new frontiers and challenges. The full-length papers will be published by Springer Nature within the fully indexed new Book series called **Advances in Nonlinear Dynamics**.
